

Pipe and Duct Seals

Amlite all new range of quick fit fully watertight chamber seals for pipework, ducting and cable entries.

- Quick and simple single hole installation saving time and cost
- Interchangeable ends to suit most common pipe sizes
- Flexible inner section to allow easy pipe connections
- Made from fuel resistant nylons and Nitrile rubbers

Amlite's all new range of **Amseal** Pipe and Duct seals were designed as a quality, time saving alternative to many existing chamber seals. The **Amseal** design eliminates this time issue by offering a single drilled hole for the seal which is simply tightened within the chamber with a single clamping nut. An integrated o ring seal ensures a tight secure seal to the outer wall of the chamber.

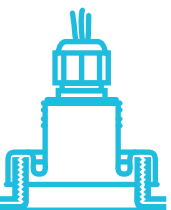

Within the chamber a suitable end section corresponding to the required pipe or duct size is fitted (see table below) and securely clamped.

Amseal products are used in numerous applications throughout

the civil engineering industry including petrol forecourt chambers, drawpit / inspection chambers and other applications where there is a requirement to seal pipes and ducts on entry and exit of chambers.

Used in conjunction with **Amlite's** watertight chambers and composite manhole covers, clients can enjoy the benefits of a fully designed, safe and watertight system for their installations.

The **Amseal** range is just one of many innovative products from Amlite. Please visit our website at www.amliteltd.com for more details.

| Amseal Sizes & Part Numbers | | | | | | |
|---|---|---|---|--|---|---|
