

Composite Trench Covers

High strength lightweight system of composite trench covers for large span applications.

Lightweight high strength covers load tested in accordance with EN124 2015 standard

- Suitable for Ducts, pipework, drainage lines
- Custom sizing available for specific requirements
- Excellent anti slip properties

Amlites composite trench cover systems are used in a multitude of applications where larger below ground installations require a safe and secure access point. Using a matrix of **Amlite** composite trench cover sections, the system can be cost effectively manufactured to specific client requirements.

Amlite composite trench covers offer a number of benefits over traditional steel or concrete covers such as high strength to weight ratio, excellent anti slip properties and are available as B125 and D400 weight loadings.

The trench covers are designed to allow easy to access single cover removal for basic inspection and maintenance but full access for product removal or maintenance when required.

In addition **Amlite** trench covers can be fitted with security locking systems to restrict access where required.

See some examples of common sizes and load ratings below.

Part Number	Size and Load Rating
ATR8050B125	800mm x 500mm B125 Rated Composite Trench Covers
ATR10050B125	1000mm x 500mm B125 Rated Composite Trench Covers
ATR12050B125	1200mm x 500mm B125 Rated Composite Trench Covers
ATR14050B125	1400mm x 500mm B125 Rated Composite Trench Covers
ATR4560D400	450mm x 600mm D400 Rated Composite Trench Covers
ATR9060D400	900mm x 600mm D400 Rated Composite Trench Covers
